Claims

[c1]

1. A method, comprising:

conducting a permeable-reactive barrier (PRB) treatment of a contaminated aqueous medium; and in-well monitoring effectiveness of the PRB treatment.

[c2]

2. The method of claim 1, wherein the in-well monitoring is conducted by at least one well placed up to about 25 feet up-gradient of the PRB and at least one well placed up to about 25 feet down-gradient of the PRB.

[c3]

3. The method of claim 1, wherein the in-well monitoring is conducted by at least one well placed about 1 to about 6 feet up-gradient of the PRB and at least one well placed about 1 to about 6 feet down-gradient of the PRB.

[c4]

4. The method of claim 1, wherein the in-well monitoring is conducted by at least one well placed about 2 to about 4 feet up-gradient of the PRB and at least one well placed about 2 to about 4 feet down-gradient of the PRB.

5. The method of claim 1, wherein the in-well monitoring is conducted by a plurality of wells arranged substantially along a transect to a PRB zone.

for the first transform of the first transfor

6. The method of claim 1, wherein the in-well monitoring is conducted by a plurality of in-well sensors arranged substantially along a transect to a PRB zone and the transect is defined by a \pm 20 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 5 feet of a mid point of each well open screen interval.

[c7]

7. The method of claim 1, wherein the in-well monitoring is conducted by a plurality of in-well sensors arranged substantially along a transect to a PRB zone and the transect is defined by a \pm 10 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 3 feet of a mid point of each well open screen interval.

[c8]

8. The method of claim 1, wherein the in-well monitoring is conducted by a

plurality of in-well sensors arranged substantially along a transect to a PRB zone and the transect is defined by a \pm 6 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 1 feet of a mid point of each well open screen interval.

- [c9]
- 9. The method of claim 1, wherein the in-well monitoring is conducted by a plurality of in-well sensors arranged substantially along a transect to a PRB zone, wherein the transect is defined by flow of contaminated agueous medium.
- [c10]
- 10. The method of claim 1, comprising determining flow of contaminated aqueous medium up-gradient, down-gradient and transecting a PRB zone, placing monitoring wells along the flow of contaminated medium and conducting the in-well monitoring with the monitoring wells.

The state of the s

11. The method of claim 1, comprising determining flow of contaminated aqueous medium up-gradient, down-gradient and transecting a PRB zone, placing monitoring wells along the flow of contaminated medium and conducting the in-well monitoring with the monitoring wells, wherein at least one monitoring sensor is placed in-well up-gradient of the PRB zone.

[c12]

--

12. The method of claim 1, comprising determining flow of contaminated aqueous medium up-gradient, down-gradient and transecting a PRB zone, placing monitoring wells along the flow of contaminated medium and conducting the in-well monitoring with the monitoring wells, wherein at least one monitoring sensor is placed in-well down-gradient of the PRB zone.

[c13]

13. The method of claim 1, comprising determining flow of contaminated aqueous medium up-gradient, down-gradient and transecting a PRB zone, placing monitoring wells along the flow of contaminated medium and conducting the in-well monitoring with the monitoring wells, wherein at least one monitoring sensor is placed in-well within the PRB zone.

[c14]

14. The method of claim 1, comprising determining flow of contaminated aqueous medium up-gradient, down-gradient and transecting a PRB zone, placing monitoring wells along the flow of contaminated medium and

conducting the in-well monitoring with the monitoring wells, wherein at least one monitoring sensor is placed in-well up-gradient of the PRB zone, at least one monitoring sensor is placed in-well down-gradient of the PRB zone and ate least one monitoring sensor is placed within the PRB zone.

- [c15] 15. The method of claim 1, comprising monitoring effectiveness by measuring at least one of pH, oxidation-reduction potential and specific conductivity.
- [c16] 16. The method of claim 1, comprising determining nature, extent and velocity of a plume of contaminated aqueous medium and conducting the PRB treatment of the contaminated aqueous medium.
- [c17] 17. The method of claim 1, comprising selecting and providing a barrier zone of reactive material and conducting the PRB treatment with the barrier zone.

 [c18] 18. The method of claim 17, comprising excavating a trench suitable for

[c19]

[c20]

- 18. The method of claim 17, comprising excavating a trench suitable for receiving the reactive material and placing the reactive material within the trench to provide the barrier zone.
- 19. The method of claim 18, comprising locating the trench so that the reactive material therein lies in the path of a plume of the contaminated aqueous medium.
- 20. The method of claim 1, wherein the in-well monitoring is accomplished with a sensor containing monitoring well located in the vicinity of a PRB zone.
- [c21] 21. The method of claim 1, wherein the in-well monitoring is accomplished with monitoring wells placed up-gradient and down-gradient of a PRB zone.
- [c22] 22. The method of claim 1, wherein the in-well monitoring is accomplished with a monitoring well placed within the reactive material of a PRB zone.
- [c23]
 23. A method of treating a contaminated groundwater, comprising:
 sensing a characteristic of the contaminated groundwater with a
 sensor placed in at least one well emplaced substantially along a
 transect of a longitudinal axis of a PRB zone; and
 remotely monitoring the sensing to determine effectiveness of a

remediation treatment of the groundwater.

- [c24] 24. The method of claim 23, wherein a characteristic of the contaminated groundwater is sensed with a sensor placed within the well.
- [c25] 25. The method of claim 23, wherein a characteristic of the contaminated groundwater is sensed with a sensor placed up-gradient and a sensor placed down-gradient of the PRB.
- [c26] 26. The method of claim 23, wherein the sensors are placed substantially along a transect to a PRB zone and the transect is defined by a \pm 20 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 5 feet of a mid point of each well open screen interval.
 - 27. The method of claim 23, wherein the sensors are placed substantially along a transect to a PRB zone and the transect is defined by a \pm 10 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 3 feet of a mid point of each well open screen interval.
 - 28. The method of claim 23, wherein the sensors are placed substantially along a transect to a PRB zone and the transect is defined by a \pm 6 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 1 feet of a mid point of each well open screen interval.
- [c29] 29. The method of claim 23, wherein a characteristic of the contaminated groundwater is sensed with a sensor placed up-gradient of the PRB, a sensor placed down-gradient of the PRB and a sensor placed within the PRB.
- [c30] 30. The method of claim 23, comprising adjusting the treatment of contaminated groundwater according to the monitoring.
- [c31] 31. The method of claim 23, wherein the monitoring comprises sensing a contaminant and transmitting a signal concerning the contaminant to a data collector.

- [c32] 32. The method of claim 31, wherein the data collector collects the signal and transmits information concerning the contaminant derived from the signal.
- [c33] 33. The method of claim 32, wherein the collector transmits the information to a remote monitor.
- [c34] 34. The method of claim 33, wherein the information is transmitted over a web connection, phone modem connection, radio connection, network connection, wireless connection, cellular connection, satellite connection, Internet connection or combinations thereof.
- [c35] 35. The method of claim 33, further comprising outputting a contaminant report from the remote monitor.
- [c36] 36.A method of monitoring a PRB treatment of a contaminated aqueous medium, comprising:

determining flow of the contaminated aqueous medium across a PRB zone to define a transect of the zone from an up-gradient to the zone across the zone to a down-gradient to the zone; emplacing a monitoring well up-gradient to the zone and a monitoring well down-gradient to the zone substantially along the transect; and evaluating the performance of the PRB treatment with the wells.

- 37. The method of claim 36, additionally comprising emplacing a monitoring well within the zone substantially along the transect.
- [c38] 38. The method of claim 36, wherein the transect is a straight line between flow of the contaminated aqueous medium at an up-gradient location to flow of the contaminated aqueous medium at a down-gradient location.
- [c39] 39. The method of claim 36, wherein the transect is defined by a \pm 20 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 5 feet of a mid point of each well open screen interval.
- [c40] 40. The method of claim 36, wherein the transect is defined by a \pm 10 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at

[c45]

least one down-stream well at a level that is \pm 3 feet of a mid point of each well open screen interval.

- [c41] 41. The method of claim 36, wherein the transect is defined by a \pm 6 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 1 feet of a mid point of each well open screen interval.
- [c42] 42. A method of evaluating performance of a PRB zone, comprising emplacing a sensor in a vicinity of the PRB zone; and measuring at least one of pH, oxidation-reduction potential and specific conductivity with the sensor.
- [c43] 43. The method of claim 42, comprising measuring pH, oxidation-reduction potential and specific conductivity with a plurality of sensors.
- [c44] 44. A system comprising:

 a PRB zone to treat a contaminated groundwater;

 an in-well sensor located within a gradient of the contaminated groundwater or within the PRB zone to sense a characteristic of the groundwater.
 - 45. The syst em of claim 44, additionally comprising a monitor to receive information concerning the characteristic from the sensor.
- [c46] 46. The syst em of claim 45, wherein the monitor is situated at a location remote from the PRB zone.
- [c47] 47. The syst em of claim 44, comprising at least one well placed up to about 25 feet up-gradient of the PRB and at least one well placed up to about 25 feet down-gradient of the PRB.
- [c48] 48. The system of claim 44, comprising at least one well about 1 to about 6 feet up-gradient of the PRB and at least one well placed about 1 to about 6 feet down-gradient of the PRB.
- [c49] 49. The system of claim 44, comprising at least one well placed about 2 to

[c54]

- about 4 feet up-gradient of the PRB and at least one well placed about 2 to about 4 feet down-gradient of the PRB.
- [c50] 50. The system of claim 44, comprising a plurality of in-well sensors placed within the gradient of the contaminated groundwater or within the PRB zone.
- [c51] 51. The system of claim 50, wherein the sensors of the plurality are located along a transect of the PRB zone.
- [c52] 52. The system of claim 51, wherein the transect is defined by a \pm 20 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 5 feet of a mid point of each well open screen interval.
- [c53] 53. The system of claim 51, wherein the transect is defined by a \pm 10 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 3 feet of a mid point of each well open screen interval.
 - 54. The system of claim 51, wherein the transect is defined by a \pm 6 feet wide horizontal plane that transcribes at least one up-stream monitoring well and at least one down-stream well at a level that is \pm 1 feet of a mid point of each well open screen interval.
- [c55] 55. The system of claim 44, further comprising a transmitter associated with a sensor to transmit a signal concerning the characteristic.
- [c56] 56. The system of claim 55, further comprising a collector to receive the signal from the transmitter.
- [c57] 57. The system of claim 57, wherein the collector is capable of transmitting a signal concerning the characteristic to a monitor.
- [c58] 58. The system of claim 57, further comprising a communication link that interconnects the data collector and the monitor, the communication link capable of transmitting the signal to enable a user at the monitor to obtain information concerning the contaminant.

a PRB zone to treat a contaminated groundwater;

zone to a down-gradient location.

a sensor located substantially along a transect of flow of the

contaminated groundwater from an up-gradient location, across the PRB
